

NYP Policies, Standards & Guidelines on Data

1. Data exploitation is a key pillar of "digital-to-the-core" in the Public Sector Transformation efforts. Central to NYP's data strategy is the exploitation of data to inform on policies and programmes, and improve operations and service delivery.
2. Data exploitation, however, goes hand in hand with securing data. Citizens expect an efficient government to improve service delivery with data, and at the same time expect that their privacy will be protected. Ensuring that citizen data is properly managed and kept secure fosters their trust and confidence in our exploitation of data.
3. This set of **NYP data management policies and guidelines** govern how NYP collects, stores, uses, shares and disposes data. They are adapted from IM8 and contextualised to equip officers in NYP's Corporate Departments/Schools with the knowledge and processes to manage and use data securely.
