

Governance Structure - NYP Level

The structure depicts the involvement of the entire NYP team in our data governance effort, from PCEO to individual staff who handles data.

At the top, PCEO chairs the ICT and Digitalisation Steering Committee (IDSC) which provides the platform to deliberate strategic issues and direction for NYP to achieve its key mission.

The IDSC, with guidance and support from the ministry family and Whole-of-Government (WOG), work closely with relevant appointment holders, CIO, CISO, CDO and CNC Directorate, to ensure compliance, improve data quality, consistent classification and to encourage usage to enhance service delivery and operational efficiency; through the work of various data projec teams which will be built up gradually into our Data Community.

On governance, our focus is on leadership and accountability where the senior leadership team takes responsibility in providing the direction and driving NYP towards a data-driven organisation. Supported by a clearly defined structure, and their corresponding roles and responsibilities, the team can work together towards achieving our strategic intent.

Two committees, shown in the data governance structure figure above, are established to ensure proper translation, contextualisation and implementation of strategies, initiatives and policies decided at the IDSC.

The [Data Management Committee \(DMC\)](#) will focus on compliance, data quality and classification issues, while the Data Application Committee (DAC) will look after the exploitation and usage aspects of our data.
